Pharmacy at BCMH is a hidden asset

Pharmacy is a necessity involved in the Barton County Memorial Hospital (BCMH) mission. It is essential for providing the necessary medication and supplies needed by the physicians. The pharmacy not only serves the patients but also helps to maintain the licenses of the doctors. The pharmacy is a hidden asset as it is not seen by the patients, but it plays a crucial role in ensuring their safety and health. The pharmacy is well-equipped and staffed by experienced professionals who ensure that the patients receive the correct medication in a timely manner.

What can you expect when your doctor recommends you have a “scope” at BCMH?

What to expect when your doctor recommends you have a “scope” at BCMH. A “scope” is a medical procedure that involves the use of a small scope to look inside the body. This can help doctors diagnose and treat various medical conditions. The type of scope used depends on the specific procedure being performed. Here are some examples of scopes and what you can expect when having them:

- Colonoscopy: A colonoscopy is a procedure used to examine the inside of the colon and rectum. During the procedure, a long, flexible scope is inserted into the rectum and slowly moved up the colon. The doctor will check for any abnormalities, such as polyps or tumors.

- Endoscopy: An endoscopy is a procedure used to examine the inside of the digestive tract. This can include the stomach, small intestine, or colon. The doctor will use a scope to look for any abnormalities such as ulcers or tumors.

- Bronchoscopy: A bronchoscopy is a procedure used to examine the inside of the airways, including the lungs. The doctor will use a scope to look for any abnormalities such as tumors or inflammation.

- Cystoscopy: A cystoscopy is a procedure used to examine the inside of the urinary bladder. The doctor will use a scope to look for any abnormalities such as tumors or infections.

- In addition to medical procedures, a “scope” can also refer to a dental procedure such as a root canal or a filling. In these cases, a small scope is used to make sure that the procedure is performed accurately and efficiently.

Asthma Education Specialist, Cindy Gartner and Nurse, Lindsay are always ready to help identify what triggers your child’s asthma.
