

Its Time To “See The Light” With Pain, Numbness And Tingling...

By Dr. Frank Marghella
Are you in pain?

Symptoms like pain, numbness and tingling may not have to be lived with! There is now a breakthrough with LED light technology that has been shown to help with such symptoms.

First question:

Is it peripheral neuropathy?

There are many questions to be asked about Peripheral Neuropathy but the first one should be whether or not it is the correct condition. Although it may seem mysterious, there are several things that can be done about it both in treatment, correction and even prevention. To decide whether it is or it isn't, however, a knowledge of what it is would be required.

What IS Peripheral Neuropathy?

Peripheral Neuropathy is a condition of the peripheral nervous system (PNS), which is the network of nerves that connect the central nervous system up with the limbs or

extremities. It relays communication between the brain and spinal cord with the rest of the body. Pain or numbness in this system can cause a variety of problems, complications and symptoms.

Peripheral Neuropathy Symptoms

Symptoms abound but the most popular are:

- numbness or tingling in hands or feet
- touch sensitivity
- loss of coordination, balance or falling
- muscle weakness
- pain in extremities

These symptoms can come from a variety of sources and, though they may be classified under Peripheral Neuropathy, they may require different levels and types of intervention.

A Breakthrough in Peripheral Neuropathy

There is a fairly recent technology that involves high-intensity LED light which can penetrate deep into tissue to help with this

condition. When used in conjunction with Chiropractic care, the results can be miraculous for those suffering from these symptoms, depending upon, once again, the traced-down cause of the symptoms themselves.

Killer Pain, Requires a Killer Diagnosis.

It is not enough to be an excellent practitioner when it comes to Peripheral Neuropathy symptoms. You must be able to utilize these symptoms to trace back to a physi-

cal cause. It is in this area that your Chiropractor is especially skilled and why you can get a much deeper result from treatment.

LED Light and Chiropractic Can Help

Dr Frank Marghella has been combining use of LED light technology and chiropractic care to help with symptoms such as those experienced in Peripheral Neuropathy. Many of these symptoms have been alleviated with many patients who felt they did not have any alternative to drugs and “coping” with their health conditions.
