**CONGRATULATIONS TO
ALL THE 2018 GRADUATES**

**WHAT WORKS TOGETHER,
WEARS TOGETHER.**

**TWO SUPERIOR PARTS.
ONE UNBEATABLE SYSTEM.**

There's a reason why New Holland cutting parts continue to set the industry standard. Our guards and sections are designed to be superior on their own, but when used together, you've got a cutting system that performs better and lasts longer than anything else.

**NEW HOLLAND
GUARDS:**

BACK BAR

Specially heat treated to 53-55 Rockwell hardness to reduce pressure wear between the guard and the section.

**NEW HOLLAND
EXCLUSIVE!**

TRASH BAR

Undergoes an additional induction hardened process to help withstand wear from friction of crop, sand and debris.

LEDGER AREA

Additional induction hardening provides longer wear sharp surface for increased cutting efficiency.

MATERIAL

Modified, high carbon steel is through hardened before induction hardening, which offers superior strength compared to surface treatments.

**NEW HOLLAND
SECTIONS:**

BACK HARDENED

Back edge is hardened to 49-54 Rockwell hardness to increase wear life and eliminate the need for frequent adjustments.

SERRATIONS

Top serrated design of crop preparation sections directs flow of material across sections, sharpening the teeth as you cut. On grain head sections, a special design and serration prevents excessive wear across the top.

ZINC COATING

Has the same strength and wearability as chrome, but offers superior rust protection and, most importantly, costs less in the process that doesn't require plating.

MATERIAL

Made from shot blasted 100% high carbon steel to deliver superior strength and wear life.
