

# Home security for the do-it-yourselfer

Wednesday, April 25, 2018

Spring Home Improvement 5

Feeling secure at home is a priority for many people. Many people consider installing security systems in their homes to improve their sense of well-being. Whether one owns or rents, individuals may be surprised to learn that do-it-yourself security systems can be savvy investments.

The right system can help people protect their belongings and their families, but sorting through the various security systems on the market can be a daunting task. While full-service setups that include professional in-

stallation and monitoring are available, some homeowners may want to investigate the highly customizable DIY kits now available. Some include personal monitoring, while others are self-install technologies with professional monitoring.

Before getting started, homeowners and renters can ask themselves a few questions to help narrow down their options.

- What is your budget? Professional installation and monitoring will likely cost more than DIY kits.
- How large is the home?

- Are you tech-savvy?
- How frequently are you out of the home on vacation or extended trips?
- Do you desire emergency response?
- Do you want an entire package or just some deterrent devices?

Once men and women have answered these questions, it's time to start shopping. Here are some DIY security system items that may be of interest.

#### Smart home security systems

These home security systems connect to a home's

Wi-Fi network so they can be monitored and controlled using a smartphone app. Others may be accessed through an application on the internet. It is important to look for a system that has the extra security of technology that is not easily hacked.

#### Security cameras

Some people may only want to watch the inside and outside of their residences. It can take mere minutes to set up wireless security cameras around the house. These devices connect to a Wi-Fi network and give customers free access to a constant stream of video. Some systems make it easy for homeowners to listen in on what's going on at home and even talk to anyone within the camera's range. Others can be paired with cloud storage for recording video.

#### Professionally monitored

Residents who are away from home frequently or are too busy to constantly monitor security systems may like the peace of mind of professionally monitored kits. Services like Frontpoint®, Link Interactive® and Scout® are just three that have affordable starter kits and video monitoring. Monitored alarm systems can be set to call the police or other emergency services if necessary.

#### Entry-level or advanced systems

Entry-level systems typi-

# Preparing garden beds for spring and beyond

Begin preparing garden bed soil early for new plants.

Gardening enthusiasts may have been thinking about their landscape plans throughout the winter, eager to once again get their hands dirty with soil. Whether a home gardener is making preparations for edible crops or beautiful flowers, he or she must take time to make the soil amenable to planting. To establish hearty, durable plants, gardeners can focus on three main areas: addressing soil composition, cultivating and adding nutrients.

#### Soil composition

Many gardeners prefer growing a variety of plants in their gardens. Such an approach requires taking inventory of the type of soil in one's garden and making the necessary modifications so that the types of vegetables, herbs, shrubs, or flowers that will be planted can grow in strongly. In fact, according to the plant company Proven Winners, the most important step to developing good roots is preparing the soil.

Take a sample of the soil and examine it to see what is present. If the soil is too full of clay, too sandy, too dense, or too loose, that can lead to problems where plants cannot grow in strong. Work with a garden center to add the right soil amendments to make a

rich soil. This may include organic compost or manure, which will also add nutrients to the soil.

#### Cultivation

Cultivating the soil can involve different steps. Removal of weeds, errant rocks, roots, and other items will help prepare the soil. Mother Earth News suggests working on garden soil when the soil is damp but never wet; otherwise, garden soil can become messy and clumpy. Use a digging fork or shovel to lightly turn the soil when it's mostly dry. Gentle tillings also can open up the soil to incorporate the nutritional amendments and relieve compaction that likely occurred from freezing temps and snow pressure. Tilling also helps with drainage and oxygen delivery to roots. The DIY Network suggests turning over soil at a depth of 12 inches to work the soil — about the length of a shovel spade. However, the resource Earth Easy says that existing garden beds have a complex soil ecosystem and simply top-dressing with compost or manure can be enough preparation for planting. Gardeners can experiment with the methods that work best for their gardens.

#### Nutrition

Testing the pH and the lev-

els of certain nutrients in the soil, namely nitrogen, phosphorous and potassium, will give gardeners an idea of other soil additions that may be needed. Soils with a pH below 6.2 often can benefit from the addition of lime several weeks before planting. Soil tests will determine just how much fertilizer to add to the soil. Complete fertilizers will have equal amounts of nitrogen, phosphorous and potassium. Individual fertilizers can amend the soil with only these nutritional elements that are needed.

Top-dressing empty beds with a layer of mulch or compost can prevent weed growth and preserve moisture until it is time to plant. If existing shrubs or plants are in garden beds, use more care so as not to disturb roots or dig too deeply.

Preparing garden beds takes some effort initially, but can be well worth the work when plants flourish throughout the growing season.

cally include a few door and window sensors, a motion detector and a hub that communicates with these sensors. This may be enough for someone in an apartment or small house. More extensive systems may include additional sensors, door locks, garage door openers, surveillance cameras, lights, sirens, and even water and smoke detectors.

Do-it-yourself security systems represent a new wave to safeguard one's belongings and family. Kits continue to evolve and have become more seamless than ever.
