NOTICE OF RIGHT OF WAY VACATION HEARING

PIKE BAY TOWNSHIP CASS COUNTY

NOTICE IS HEREBY GIVEN that the town board of Pike Bay Township, Cass County, Minnesota will conduct a public hearing on the 13th day of November, 2018 at 6:00 p.m. at the Pike Bay Town Hall for the purpose of considering vacation of the following described roads pursuant to Minn. Stat. §368.01 Subd. 25:

63rd Avenue NW Road Centerline: A portion of 63rd Ave NW located in Cass County, Minnesota: situated in the SWI/4 SE 1/4, Section 09, T.145 N. R.31W., 5th P.M., more particularly described as follows: commencing at the South 1/4 corner of said Section; said corner marked with a MN DOT cast iron monument set by Robert Murray in 1993; thence N. 00°50'46" E. a distance of 704 feet; said point being the TRUE POINT OF BEGINNING; thence N. 02°03'34" E., following the centerline of said road, a distance of 438.4 feet; thence N. 04°09'51" E., following the centerline of said road, a distance of 177.2 feet; said point being the END POINT; containing 615.6 feet more or less; SUBJECT TO easements and rights-of-way as recorded in said County.

Upper Cass Frontage Road (T-2038) Road Centerline: A portion of Upper Cass Frontage Road (T-2038) located in Cass County, Minnesota: situated in the SWI/4 SE 1/4, Section 09, T.145 N. R.31W., 5t h P.M., more particularly described as follows: commencing at the South 1/4 corner of said Section; said corner marked with a MNDOT cast iron monument set by Robert Murray in 1993; thence N. 00°50'46" E. a distance of 704 feet; said point being the TRUE POINT OF BEGINNING; thence N. 87°36'42" E., following the centerline of said road, a distance of 358 feet; thence S. 89°38'57" E., following the centerline of said road, a distance of 283.4 feet; thence S. 88°16'53" E., following the centerline of said road, a distance of 914.6 feet; said point being the END POINT; containing 1556 feet more or less; SUBJECT TO easements and rights-of-way as recorded in said County.

The LLBO has requested Pike Bay to relinquish jurisdiction as the road authority for the above described roadways to facilitate LLBO economic development of the real property adjacent to said roadways and allow improvement of the roadways by the LLBO for that purpose, and Pike Bay desires to assist the LLBO in the economic development of the area and improvement of the roadways serving that development with the mutual understanding:

- (1) that the roadways will remain available for general public (2) That no parcel of property will be deprived of legal access
- as a result of any vacation proceeding, and:
- (3) that henceforth the roadways will be under the road authority jurisdiction of the LLBO who will maintain the same in the future.

All persons interested in this matter are encouraged to attend

Mary Almendinger, Clerk of the Township of Pike Bay

CASS LAKE-BENA SCHOOL DISTRICT NO. 115

Regular School Board Meeting • Wednesday, October 24, 2018 5:30 p.m. - Cass Lake-Bena High School Media Center

- ~ AGENDA ~ 1. Call to Order
- 2. Roll Call of Attendance 3. Pledge of Allegiance
- 4. Agenda Approval 5. Public Comment
- 6. Consent Agenda
 - A. Approve the following meeting minutes: September 19, 2018 School Board Working
 - September 26, 2018 Regular School Board Meeting
 - III. October 4, 2018 Special School Board Meeting B. Approve accounts payable list
 - C. Approve the hire of the following positions:
 - I. JV Wrestling Coach
 - II. JV Girls Basketball Coach
 - III. Dance, Regalia and Beading Advisor
 - IV Para-Educator(s)
 - V. Custodian(s)
 - VI. Food Service
- 7. Hearing of Reports 8. New Business
 - A. Presentation by Rochelle Johnson, Superintendent I. Request for a middle/high school permanent
 - substitute teacher
 - A motion to approve the addition of a middle/high
 - school substitute teacher through Teachers-On-Call. A motion to approve the 2018 World's Best
 - Workforce as presented.
 - A motion to approve the 2018-19 District's
 - Assurance of Compliance as presented. A motion to approve the 2018-19 seniority lists as
 - presented: I. Certified
 - II. Early Childhood
 - III. Adult Basic Education
 - F. A motion to approve the MSEA para mentor program as presented.
 - G. A motion to approve the out of state travel request from school board members and superintendent to attend the 2018 NIISA Annual Conference in Las Vegas, Nevada, December 10 and 11, 2018.
- 9. Personnel
- 10. Upcoming Meetings and Events
 - A. Tuesday, November 6, 2018 Election Day 7:00 a.m. – 8:00 p.m.
 - Check your local precinct for voting polls. B. Wednesday, November 7, 2018
 - LIEC Parent Committee Meeting 5:30 p.m. - High School Cultural Center
 - Wednesday, November 21, 2018
 - School Board Working Session 5:30 p.m. - High School Media Center
 - D. Wednesday, November 28, 2018
 - Regular School Board Meeting
 - 5:30 p.m. High School Media Center
- 11. Adjournment

Mastering The Garden

Gardener's Fall Chores By Wally Peck, Master Gardener

Extension

MASTER GARDENER

Gardening came to a screeching halt this year for many of us! If you are like me, there is still a long list of chores that need to be done before calling it a year. With several inches of snow on the ground and leaves still on the trees, we can only hope it warms up and dries out so the leaves can be raked or mulched.

Assuming that it does, setting the mower low for the last mowing will reduce the damage from meadow voles since they look for long grass to feed on under the snow. Mowing low also reduces the occurrence of snow mold in the spring...somewhat. Because the ground is so wet this fall, you may want to wait until spring to till the garden, especially if you are in heavier soil.

Taking some time now with your power equipment will save you many headaches next spring. With today's ethanol blend gasoline

Wally Peck

it is important that it does not stay in the carburetor over the winter. In many cases you can turn off the fuel valve, run the engine until it stops, and then complete the other tasks to get it ready for winter storage.

Fall is a good time to change oil on 4-stroke engines so contaminated oil is not left in the engine over winter. With 2-stroke engines it is important to drain the fuel from the tank and then run the engine until it quits; put the choke on and make sure every bit of gas is out of the carburetor. Fuel

stabilizer helps prevent deterioration of fuel that has to sit over winter. I always add it to small engine gas, summer or winter and never have problems. Many mowers and other pieces of power equipment no longer have fuel shut-off valves. With those you will have to invert the whole engine to drain the fuel or buy a suction device to empty the tank.

A little trick I learned from the "Old Car Guys" is to tuck fresh dryer sheets in several openings around small engines to keep the mice from building nests in them. It is rather pleasant to smell when you start those engines up next spring too. Just remember to take them out before starting the engines!

This is also a good time to gather together all the garden tools from all their hiding spots so you can clean them up. Put a fresh coat of paint on the handles, clean rust and corrosion off the blades, oil the joints, and get them ready for next spring. Clippers, loppers and hedge trimmers will likely need sharpening before spring. Be careful to maintain the proper angle on the blades when sharpening so they will preform like new!

Did you forget your hoses

outside? Darn. Hopefully we will have some warmer days coming up so they can be drained of all water and coiled up. We have two rain barrels that are full and need to be emptied before they freeze solid. We fill empty milk jugs with the water and save it for houseplants and seed starting in the spring. Rainwater seems much better for houseplants than tap

One of the last things I do is to make a chart of what was planted in the gardens and where. Being a bear of shrinking brain, when spring comes I do not remember where everything was. With that chart I can rotate my way out of trouble next spring. I hope you had a good gardening year; seed catalogs should start appear-

Check the University of Minnesota Extension updated website for help on other questions. Simply type your subject in the search box when you open the Extension page www.extension.umn. edu. State pheasant index up 19 percent from last year

DEPARTMENT OF NATURAL RESOURCES

Wet spring and summer affected reproduction in some areas; habitat declines remain long-term concern

The 2018 roadside survey for pheasants showed a 19 percent increase in the overall pheasant index from 2017. While the index is similar to the 10-year average, it is still 52 percent below the long-term average.

"Given the April snowstorms and heavy rains across a good portion of the pheasant range this year, it was surprising to see increases in the pheasant indices across so many regions," said Lindsey Messinger, the Minnesota Department of Natural Resources wildlife biologist who coordinated this year's survey. "It appears hens may have delayed areas."

Weather and habitat are the two main factors that drive Minnesota's pheasant population trends. Weather causes annual fluctuations in pheasant numbers. In the south-central region of the pheasant range, late-season snowstorms and heavy rain this past spring and summer has been tough for pheas-

Habitat can help mitigate the impacts of weather and the availability of quality nesting habitat is more important for long-term pheasant population trends. Conservation Reserve Program (CRP) acres in particular play a large role in providing habitat for pheasants in Minnesota. The program, covered under the federal Farm Bill, pays farmers to environmentallyremove sensitive land from agricultural production and restore vegetation that will reduce soil erosion, improve water quality, and provide habitat

for wildlife and pollinators. Minnesota peaked nesting habitat acres, particularly CRP acres, in 2007 but has declined since then. Minnesota added about 82,500 habitat acres in the past year, many of which were CRP acres; however, nearly 297,000 acres of CRP may be lost within the next two years due to contracts that are set to expire. Roadside survey data

The DNR's August road-

side survey for pheasants showed a 19 percent increase in the overall pheasant index from 2017. This year's statewide pheasant index was 45.5 birds per 100 miles of roads driven. The pheasant index in-

creased in all regions except the south-central region, which decreased by 36 percent from 2017 The high-

est pheasant counts were in the west-central, southwest and central regions where observers reported 48 to 65 birds per 100 miles driven. Hunters should find the best hunting opportunities in these regions.

Minnesota's 2018 pheasant season is open Saturday, October 13, through Monday, January 1.

Annual weather impacts on pheasants

Winters that linger can impact the start of the breeding season and success of early nests. Heavy rain, particularly at or just after hatching, can impact chick survival.

One indication of delayed nesting activity were the ages of broods that observers recorded during nesting and chicks were able the roadside surveys. From to tolerate the rain in most brood ages, approximate hatch dates are calculated. The range-wide hatch date in 2018 was nearly a week later than in 2017, and a few days later than the longterm average. Hatch dates in the southwest of June 26 and south-central of June 23 were 20 and eight days later, respectively, than in 2017, and they were one to two weeks later than the 10-year and long-term aver-

Another key indicator of annual reproduction is the number of broods observed during roadside surveys. The 2018 statewide brood index increased 28 percent from last year. Regional brood indices increased in every region except the east-central region, where it remained similar to last year, and the south-central region, where it declined by 28 percent compared to last

"Unfortunately, heavy rains came during the period of peak hatch in the southcentral region," Messinger said. "And as our survey results indicate, brood survival was affected in this region.'

Survey information

Monitoring pheasant population trends is part of the DNR's annual August roadside wildlife survey, which began in 1955. DNR wildlife managers and conservation officers in the farmland region of Minnesota conduct the survey during the first half of August. This year's survey consisted of 171 25-mile-long routes, with 151 routes located in the pheasant range.

Observers drive each route in early morning and record the number and species of wildlife they see. The data provide an index of relative abundance and are used to monitor annual

ulation trends of pheasants, age. grav (Hungarian) partridge, eastern cottontail rabbits, white-tailed jackrabbits, mourning doves, and other

changes and long-term pop- above the long-term aver-

dex remained similar to pheasant. 2017 and was 50 percent below the 10-year average and 93 percent below the longterm average.

• The mourning dove index decreased 7 percent from 2017 and remained below the 10-year average and long-term averages. • The cottontail rabbit

index decreased 23 percent from 2017 but was 13 percent above the 10-year average and similar to the longterm average. • The white-tailed jack-

rabbit index was similar to

last year and remains his-

torically low. The white-tailed deer index decreased 13 percent from 2017 but was still 19 percent above the 10-year average and 99 percent

During the 2018 pheasant season, the daily bag limit is two roosters through November, and it increases to three roosters on Saturday, The 2018 August Roadside December 1. The posses-Survey report and a map of sion limit is six roosters pheasant hunting prospects (increasing to nine roosters are available at mndnr.gov/ on December 1). Shooting hunting/pheasant. Also re- hours are 9 a.m. to sunset. corded in this year's survey: Additional details are avail-• The gray partridge in- able at mndnr.gov/hunting/
