

ELECTRIC

Electrical Safety is Important to All of Us

Research shows that farming is a hazardous occupation. These hazards include electric shock which can cause farm worker fatalities. Many farm workers have been seriously injured as a result of contacting power lines while moving or installing augers or lifting grain probes, irrigation pipe or well pipe.

Give us a call, let's sit down and visit about your current electrical systems.

- Getting your system up to code, compliance with electrical codes is critical to the safety of your feedlot or farm's electrical system.
- Grounding: Your electrical equipment may operate, but will not operate safely without proper grounding
- Standby Electrical Power System: This can protect your livestock, your equipment— and your livelihood.
- Electric Motors: Choosing the right electric motor for farm applications and installing the wiring and controls.
- Electrically-heated stock waterers
- Lighting for Safety &-Security
- Lightning Protection
- Ventilation
