

boom and watched the plows go under us. There would be no way of capturing this event from the ground," Jean explained.

In the third shot, we see kids of all ages scattered around Steamer Hill. Each picture tells a different story, but the one thing they all have in common is they are

the newest generation of Steam Threshers. They are the generation pulling on grandpa's boots, following along in their dad's footsteps. Steam engines are a thing of the past, but if the future generation is willing to keep them running, they will still thresh. "Kids make the day at Rollag. Whether it is

watching the Wobbler Class, seeing their excitement for the first time behind the wheel of a BIG tractor or operating a real model steam engine, passing down the tradition feels wonderful," Jean commented.

The fourth collage of pictures are quite random,

Microbial Catalyst™ Technology

## Turn on the Bugs that Increase Yield

Microbial Catalyst™ technology stimulates beneficial soil microbes for healthier crops. More active microbes produce more nutrients plants need to thrive.

SoluMin® Technology

## Easy to Use

Products formulated with SoluMin® are flexible and easy to work with. Products like Generate® work the way you work.

- No additional steps required
- Works with existing equipment and methods
- Can be applied in-furrow or as a foliar

Kids of all ages scattered around Steamer Hill.

Things you see on random walks around the WMSTR grounds.
