## How to protect wood floors from inclement weather

Wood floors are a worthwhile investment that can improve the beauty and function of just about any room in a home. Even though wood floors are durable, and new protective treatments help seal out many of the things that may have damaged floors in the past, homeowners still need to prioritize protecting their hardwood floors.

Certain seasons of the year can be more harsh on wood floors than others. For example, seasons characterized by moisture and precipitation, particularly the early spring, winter and fall, can be hard on wood floors. The experts at ServiceMaster Clean say that cold, snowy days can damage wood floors, and Lumber Liquidators agrees that winter weather can be harsh on flooring.

Homeowners need not give up on hardwood if they live in an area that sees all four seasons. They just need to take a few steps to keep floors looking beautiful.

• Clean up the salt. Salt that keeps sidewalks and streets clear of snow and ice inadvertently gets tracked inside a home. Hard chunks of salt can scratch wood floors, and

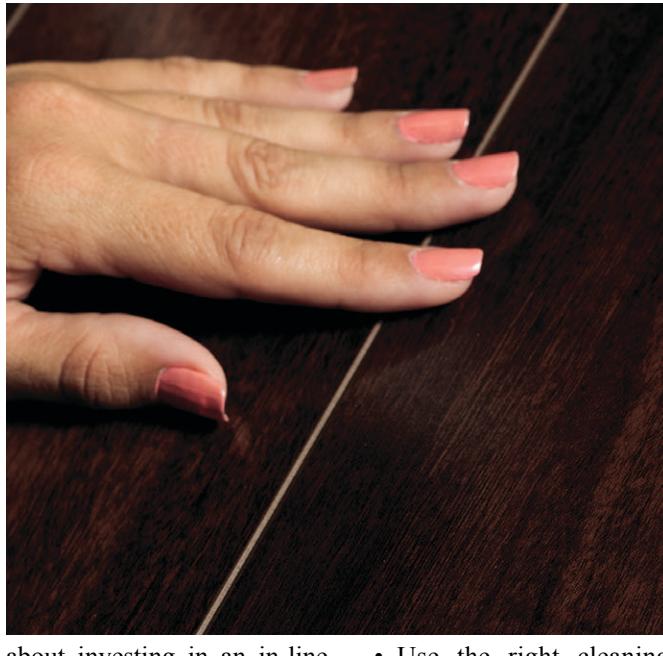

if left to sit, that salt can eventually cause white marks and other stains. Routinely vacuuming and sweeping up salt is necessary to protect wood floors.

• Invest in shoe storage. Wet or snowy boots can create puddles around the house. Have a special mat or tray by the front door where wet shoes can be kept. A nice bench in the entryway makes it easy for residents and guests to remove their shoes until it's time to go back outside.

• Use water-wicking mats. Homeowners will probably need a few extra mats around to tame errant drips and wipe shoes. Any entrance that might be used by people or pets should be protected. Try to avoid petroleum-based, rubber-backed mats, as they could discolor the wood floor.

• Control humidity indoors. Cold, dry air in a home can be problematic because the moisture in the wood can eventually evaporate into the air. The heat will suck that moisture from the flooring, causing it to shrink, creak and splinter and become more brittle. Think

about investing in an in-line humidifier for the home's HVAC system that can keep a moderate amount of humidity in the home. Hardwood floorboards are installed to accommodate minor temperature and humidity fluctuations. This is typically a range of between 60 and 80 degrees F with a relative humidity range of 35 to 55 percent, advises ServiceMaster.

• Use the right cleaning products. Avoid excessive water to clean wood floors, and select soaps that are specially designed for wood flooring. Consult with the flooring manufacturer for a list of detergents that are safe to use.

With proper care, hardwood flooring can survive rain, snow and cold weather. FH198119

## How to store firewood the right way

waste and other issues around the house.

Wood that is freshly cut has a water content of 60 percent or more. Yet, for best burning ability, wood should be near 20 percent in water content. Green wood is hard to ignite and will not burn nearly as well or efficiently as seasoned wood. Another concern associated with green wood is that it can contribute more to creosote accumulation in the flue of a fireplace. Creosote is a combustible material that may lead to fires if left unchecked.

According to BioAdvanced®, a science-based lawn, garden and home improvement innovator, seasoning wood typically takes six months to a year. Homeowners may opt to purchase seasoned wood that already has sat and dried.

Homeowners who have an abundance of firewood have to store it somewhere. Log Splitters Direct suggests choosing a dry, breezy area of the property that is about 20 feet from the nearest door to the house. This helps avoid hitchhiker pests from coming inside with the wood, such as termites, ants, spiders, and mice. Do not stack the wood flush against a

structure. It should be at least a few inches away to allow airflow behind the stack.

Stick to organized rows of wood no more than four feet high. Log racks and pallets and posts will keep the wood up and off of the ground where moisture and rotting can develop. Placing the logs in an unorganized pile will impede air flow and cause the wood to rot rather than continue to dry and season even more.

Green wood is less expensive than seasoned wood. Those who prefer this method should do so in the early spring and let it season over the next several months.

Bankrate says that the cost of a cord of wood varies across the country, but in general one can expect to pay between \$120 and \$180 for a cord of hardwood that is split and seasoned. This price may be higher in mid-winter when demand increases. FH198135

**LEADING EDGE** MECHANICAL  
19974 129th Ave. N.  
Park Rapids MN. 56470

Phone: 218-237-5125;
