

IF YOU HAVE PAIN, WE CAN HELP!

REGENERATIVE THERAPY FOR MANY DIFFERENT AREAS:

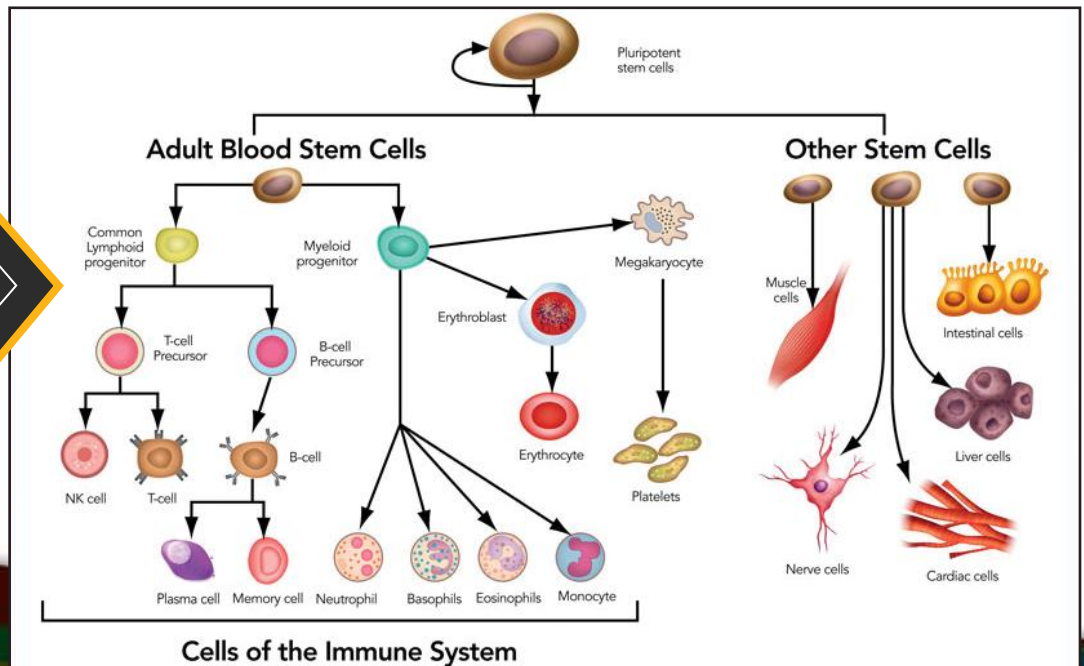

- Knees, Hips, Legs, Back & Feet
- Hair, Migraines & Tension Headaches
- Post Stroke Protocol
- Diabetic Neuropathy
- Auto immune deficiencies
- Anti-aging
- Autism
- COPD

ONLY NON-EMBRYONIC STEM CELLS

Non-Surgical | High Ratios of Success

Dr. Thomas Logan, an Ear, Nose & Throat, Head and Neck Surgeon, along with his colleague, Dr. Lee Newberry, Emergency/Critical Care Internist, both with more than 30 years experience, joined together to start a center for rejuvenation to help people with injuries to avoid surgeries. After all their years of experience, they try to avoid anything controversial, and knowing stem cell research is commonly associated with the use of controversial embryonic stem cells (ESCs), Dr. Logan and Dr. Newberry emphasize this is regenerative care, they use only non-embryonic stem cells. These types of cells are known as induced pluripotent stem cells (iPSCs) derived from a patient's somatic cell line (all cells except those involved in reproduction).

Stem cells refer to cells that can differentiate into other types of cells and can also divide in self-renewal to produce more of the same type of same cells.
