

***Tech Students**

(Continued from page 1) with 3D modeling, desk-top publishing, structural engineering and design, forensic technology, cyber security, video game design, inventions and innovations, radio controlled transportation, or scientific visualization. TSA chapters take the study of STEM beyond the classroom and give students the chance to pursue academic challenges among friends with similar goals and interests. TSA helps teachers meet the criteria for STEM education goals through exciting programs that include technology activities, competitions, leadership and teamwork for students. District Science Coordinator Dr. Shimelle Mayers said, "TSA offers exposure and empowers future inno-

vators to achieve their full potential through STEAM learning." TSA advisor and computer teacher Angela Hill Jordan was very proud of all of her students. "They persevered and worked hard to be ready for the TSA regional conference in such a short period of time. This was a great learning experience for them. I like that they were able to gain exposure to a new environment and new people." Superintendent of Schools Dr. James L. Henderson said "These types of real-life applications of what students learn in the classroom is what prepares them for the career opportunities they will be part of creating in the future. Our students are heading into a global job market and will be ready!"
