

ROSA® KNEE ROBOTIC TECHNOLOGY

Coryell Health Orthopedic Surgical Robot

Improving Patient Care - Enhancing Lives

You're unique, and so is your individual anatomy. That's why Coryell Health is proud to offer the **first Robotic Total Knee Replacement** system, using xray technology, in Central Texas. ROSA, which stands for Robotic Surgical Assistant, is designed to help your specially trained surgeon tailor the placement of your knee implant just for you.

Risky behaviors that can lead to chronic disease

Chronic diseases pose a significant threat to the general public. It can be easy for adults in the prime of their lives to overlook the danger of chronic diseases, especially if they feel good and aren't exhibiting any symptoms to suggest their health is in jeopardy. But overlooking the potential dangers of chronic disease can prove deadly.

The Centers for Disease Control and Prevention notes that chronic diseases like heart disease, cancer and diabetes are the leading causes of death and disability in the United States. Chronic diseases are costly as well, as recent reports from the Rand Corp. and the Center for Medicare and Medicaid Services indicate that 90 percent of annual health care expenditures in the United States are for people with chronic and mental health conditions.

Tobacco use

The CDC notes that tobacco is the leading cause of preventable disease, and not just among smokers. While 34 million adults in the United States smoke cigarettes, 58 million nonsmokers, including children, are exposed to secondhand smoke, which can cause chronic diseases like stroke, lung cancer and coronary heart disease. Children exposed to secondhand smoke are at increased risk of impaired lung function, acute respiratory infections, middle ear disease, and more frequent and severe asthma attacks.

Poor nutrition

The value of fruits and vegetables is well-documented. In spite of that, the CDC reports that fewer than 10 percent of adults and adolescents eat enough fruits and vegetables. In addition, the CDC reports that 60 percent of young people between the ages of two and 19 and half of all adults consume a sugary drink on any given day. Such beverages, as well as processed foods, add unnecessary sodium, saturated fats and sugar to people's diets, increasing their risk for chronic disease as a result.

Lack of physical activity

The Department of Health and Human Services has issued physical activity guidelines designed to help people improve their overall health and reduce their risk for various diseases. But the CDC reports that just 25 percent of adults and 20 percent of adolescents meet the recommended physical activity guidelines. Low levels of physical activity can contribute to heart disease, type 2 diabetes, certain types of cancer, and obesity.

Preventive care and the pandemic

Procrastination is not typically considered a good thing. But as the world spent much of 2020 confronting the COVID-19 pandemic, putting certain things on hold became part of the new normal.

In an effort to reduce infection rates, public health officials with the Centers for Disease Control and Prevention and the World Health Organization urged people to limit their in person interactions with people outside of their own households. As a result, many of the things people do on a regular basis, including seeing their physicians for wellness visits, were rescheduled.

It's understandable that many people postponed preventive care and wellness visits during the pandemic, but it's also potentially dangerous. For example, researchers with the Health Care Cost Institute found that childhood vaccinations declined by roughly 60 percent in mid-April 2020 compared with 2019. Other screenings and preventive exams, including mammograms, pap smears and colonoscopies, also declined by significant percentages during the pandemic compared to the previous year.

The National Center for Chronic Disease Prevention and Health Promotion notes the power of preventive care is undeniable. In fact, the NCCDPHP points out that, while chronic diseases are among the most common and costly of all health problems, they're also among the most preventable. Annual wellness visits and early detection efforts like routine screenings for at-risk populations can uncover problems before they escalate into something more serious. In addition, annual physicals, which are provided free of charge through many health insurance policies, provide great opportunities for doctors to advise patients on their overall health and how to improve it if exams and blood work turn up any red flags.

Visiting a doctor during the pandemic

As vital as preventive care can be, it's understandable if people are hesitant to visit their doctors during the pandemic. But patients can take certain steps to calm their nerves about booking preventive care appointments during the pandemic.

- Schedule telemedicine appointments. The number of telemedicine appointments has skyrocketed during the pandemic. While the transition from predominantly in-person appointments to telemedicine might have been a reluctant and rocky one at the start of the pandemic, many doctors' offices have since firmly established their telemedicine protocols. The Mayo Clinic advises patients who have not yet tried telemedicine to contact their doctors' offices to arrange an appointment.

- Inquire about office procedures. Doctors try to keep patients healthy, not get them sick. Various medical organizations, including the American Academy of Family Physicians, have provided thorough checklists to help physicians prepare their offices to welcome patients during the pandemic. Patients can ease their concerns by contacting their doctors' offices and asking them about their pandemic-related protocols.

- Don't hesitate to make requests. There's no such thing as being too safe from COVID-19, so patients can work with their doctors to calm their fears even further. Ask to pay copays over the phone and request that the front desk call you when the doctor is ready so you don't have to sit in the waiting room.

Preventive care is an important component of health care, even during a pandemic.

Now offering 30-year fixed-rate mortgages!

You asked, and we're delivering! MCBank is now offering 30-year fixed-rate mortgages.

Along with our conventional 30-year mortgage, we also now offer:

■ FHA loans ■ VA loans ■ USDA loans

When you're ready for your next mortgage—whether to build, buy or refinance—see us first!

MCBank. Banking for
the way you live.
