

# Census business figures show startup rebound in third quarter

By KERRY SMITH

More than 1.5 million new businesses formed nationwide during the third quarter of 2020, according to the U.S. Census Bureau, an increase of more than 77 percent from the second calendar quarter and the biggest jump in more than 15 years.

The data come from the Census Bureau’s Business Formation Statistics research, developed in collaboration with the Board of Governors of the Federal Reserve System and the Internal Revenue Service. The data set tracks applications for new employee identification numbers and is seasonally adjusted.

Timothy Sullivan, Ph.D., instructor in the Department of Economics and Finance at SIUE and director of the Office of Regional Economic Analysis, says the number of new business start-ups from July through September dwarfs any previously documented business formation numbers.

“It blows the roof off of the previous record,” Sullivan said. “Over the same time period, Illinois saw a 113 percent increase in the number of new business formations, or approximately 72,000 businesses.”

Sullivan said economists considered several theories in trying to explain the unusual increase as 2020 unfolded.

“The pandemic has effected a number of consequences,” he said. “We initially saw the (business formation) numbers heading upward on a weekly basis in late Q2 and we attributed it to pent-up demand from the spring, when individuals who’d planned to launch in April or May decided to wait until summer. But these Q3 numbers more than made up for that small dip in the spring, so our initial theory didn’t make sense.”

Economists’ next theory, according to Sullivan, was that the spike in EIN applications represented business formations in order to apply for PPP funds. “But this increase has outlasted these federal assistance programs,” he said. “There’s a consensus that a true resurgence in business formation is occurring. There’s something real going on. As an economist, I’d say that turmoil always creates opportunities for entrepreneurs.”

Wayne Barber Jr., founding co-principal at Southern Illinois commercial real estate firm BARBERMURPHY, has worked in the real estate business since

1988. He has brokered deals through four U.S. economic recessions – those in 1990-91, 2001, 2007-09 and 2020. Barber says the new business formation statistics in Q3 2020 include what are known as “high-propensity businesses,” meaning those that incorporate, lease space and have payroll.

“We’re seeing it in the prospects who are asking to see potential leasing opportunities,” said Barber. “These (Census) numbers are an encouraging sign that entrepreneurs and existing businesses – here in Southern Illinois and elsewhere – are launching and growing despite one of the toughest times in history. It’s a good sign for where the economy may be headed in terms of a recovery.”

Mike Pierceall, Barber’s colleague and a BARBERMURPHY broker associate, says he’s regularly urging property owners to be creative and flexible in their leasing terms these days, particularly if the prospect is a start-up with a solid business plan and financial capacity.

“A property owner who is willing to consider a three-year lease with allowances for a certain amount of tenant improvements that would be deducted from the rent is one option,” Pierceall said. “Prospects are also considering a lease with an option to purchase the property once the business – the tenant – is able to do so. We’re encouraging owners who are comfortable with these options to offer them in order to make their deals happen.”

Phil Hickmann, president of Associated Bank’s Southern Illinois/St. Louis Metro East market, is seeing this once-in-a-generation surge in new EIN registrations manifesting in a large number of regional companies that are pivoting and adding new product/service lines, requesting a new EIN as they reposition and diversify.

“There’s an economic theory, coined in the early 1940s by Austrian economist Joseph Schumpeter, called ‘creative destruction,’ meaning the dismantling of longstanding practices in order to make way for innovation and improved methods of production,” Hickmann said. “Schumpeter’s theory was based upon real-life examples of creative destruction that he witnessed such as Henry Ford’s assembly line. I think the U.S. is seeing this economic theory at work in 2020.”

David Kniepkamp and Catharine Magel, \$10,000 first-place winners of the 2020 SIUE Small Business Development Center’s Metro East Start-Up Challenge, incorporated ArtSculpt International, a mosaic tile manufacturing business in August.

“COVID definitely pushed us into high gear,” said Kniepkamp. “Catharine had been working for The Muny and was also an art instructor at a local university.

“When she became unemployed, we seized that opportunity to accelerate the launch of our manufacturing business. Our goal is to be a cash engine in an art environment.”

Tina O’Toole is a certified SCORE mentor in the SCORE – St. Louis Bi-state Chapter. O’Toole says the chapter saw a 28 percent increase in the total number of services provided during the first half of fiscal 2020.

“Nationally, SCORE recorded a 27 percent increase in the total (mentoring and virtual workshop) services provided during that same period,” O’Toole said.

## STUDIO .....

Continued from page 1

From left, Dr. Tim Schoenecker, dean of the SIUE School of Business; Pam Farrar, executive director of the Edwardsville Community Foundation; and Dr. Musonda Kapatamoyo, chairman of the Mass Communications Department, cut the ribbon on the new podcasting room at the Small Business Development Center in Alumni Hall. Businesses can use the facility to help spread the word about their businesses.

SBDC clients and SIUE students will be able to access the podcasting room and equipment at a low cost.

That said, the program will need financial support to keep it self-sustaining, DiMaggio May said.

“We’re just getting it ramped up so until we have that revenue coming in, we need some external support to help pay the student and maintenance of the computers,” she said. The expenses would be somewhere around \$10,000 a year, she said, and contributions are welcome.

To make use of the new studio, business must make an appointment and would face a rental cost of \$25 an hour if the business is less than three years old, or \$50 otherwise. Nonprofits would have to pay \$25 an hour. Students can use it at no cost. Editing services would be offered at \$25 an hour. The SBDC hopes to collaborate with the SIUE Department of Mass Communications for production and editing assistance.

The studio offers very basic equipment, including microphone, leased computers, a greenscreen and a ring light.

The use of the facility is likely to be minimal until COVID-19 hits the road. But, with proper safety mea-

sures in place, businesses can still use the studio for the time being.

“I already have a chamber of commerce and an insurance company wanting to come in to do some podcasting, and I know it’s going to be utilized,” DiMaggio May said.

The Illinois SBDC for the Metro East assists start-up ventures and existing businesses in the nine-county region of Calhoun, Jersey, Madison, Bond, Clinton, St. Clair, Washington, Monroe and Randolph. It is funded in part through a cooperative agreement with the U.S. Small Business Administration, Illinois Department of Commerce and Economic Opportunity, and SIUE as a service to Illinois small businesses.

For information about the podcasting studio, call the center at (618) 650-2929.

The Edwardsville Community Foundation operates as a charitable trust that receives, manages, and distributes tax-deductible charitable contributions for the benefit of the residents living in the communities served by the Edwardsville School District 7.

Since its inception in 1997, ECF has distributed more than \$6.6 million to charitable causes.
