recognize when it might start to fail.

2. Longer or constant running times

An efficient, properly working system will quickly heat or cool the home and then turn off. A system that is turning on repeatedly or having to run for awhile before the set temperature is reached could be nearing the end of its utility.

3. Strange noises

Groaning, banging or loud humming noises should be addressed. While these noises may indicate that certain components need maintenance or replacement, they also could be symptoms of age and a system nearing failure.

4. Frequent repair visits

Knowing the HVAC company's repair person by name is a sign that the system has required too much work in recent months. Repeated issues and repairs are probably signs that it's time to consider a system replacement.

5. Higher bills

Sticker shock when receiving electricity or gas bills likely mean the HVAC system isn't working efficiently and might need to be replaced.

6. Poor indoor air quality

If the home is dusty or humid or even if allergies seem to have cropped up out of nowhere, this could indicate a poorly functioning

HVAC system.

HVAC systems are vital to keeping indoor environments comfortable

and safe. Such systems may exhibit certain signs that indicate they need to be replaced.

IT'S SELLING SEASON!
