Mighty Pirates FTC Robotics

Coffeerville High School is proud to introduce its new robotics team "The Mighty Pirates" competing in the FIRST Tech Challenge (FTC). Sponsored by Arlene Conley-White, and Anthony Mason. This groundbreaking team of dedicated juniors Ayhuanna Smith, Kamari Horton, Kaliyah Pegues, Paris Turner, and Zaniyara Wright along with seniors Jakaiya Smith and Te'Asia Moore (not pictured) worked tirelessly to design, build, and program their robot completely from scratch. The team collaborated closely throughout the entire process. Ayhuanna Smith and Kamari Horton led the coding and programming efforts, ensuring the robot could operate effectively and complete competition tasks. In addition to coding, Ayhuanna and Kamari also contributed to the design and assembly of the robot. Kaliyah Pegues, Paris Turner, Zani-

yara Wright, Te'Asia Moore, and Jakaiya Smith focused on designing, constructing, and engineering the robot's physical structure, making sure it could move smoothly and perform efficiently. Through teamwork, creativity, and determination, these

students turned their vision into reality. As the first FTC team in school history, they are setting the foundation for future generations of innovators at Coffeerville High School.
